

Rabbit Anti-HBsAg [MD321R]: RM0170, RM0170RTU7

Intended Use: For Research Use Only

Description: Hepatitis B virus causes type B hepatitis and it belongs to hepadnavirus family. It is spherical in shape with a diameter of 42 nm. It contains a 27 nm partially double stranded DNA core enclosed within a lipoprotein coat. The antigenic activity of the nucleocapsid core is designated as hepatitis B core antigen. The antigens in the outer surface are called as hepatitis B virus surface antigens. Core antigens are localized within the nuclei whereas the surface antigens are present in the cytoplasm of the infected cells. Antibodies to surface antigens appear in circulation at an early stage of infection whereas the antibodies to the core antigens are detected after several weeks.

Specifications:

Clone: MD321R
 Source: Rabbit
 Isotype: IgG
 Reactivity: HBV infected tissue
 Immunogen: Recombinant full-length human HBsAg protein
 Localization: Cytoplasm
 Formulation: Purified antibody in PBS pH7.4, containing BSA and $\leq 0.09\%$ sodium azide (NaN₃)
 Storage: Store at 2°- 8°C
 Applications: IHC
 Package:

Description	Catalog No.	Size
HBsAg Concentrated	RM0170	1 ml
HBsAg Prediluted	RM0170RTU7	7 ml

IHC Procedure*:

Positive Control Tissue: HBV infected liver
 Concentrated Dilution: 25-200
 Pretreatment: Tris EDTA pH9.0 15 minutes Pressure Cooker, or 30-60 minutes water bath at 95°-99°C
 Incubation Time and Temp: 30-60 minutes @ RT
 Detection: Refer to the detection system manual

* Result should be confirmed by an established diagnostic procedure.

FFPE human infected liver tissue stained with anti-HBsAg using DAB chromogen
